

Stainless Steel Equipment Care and Cleaning

PROPER CARE OF STAINLESS STEEL WILL PREVENT RUSTING

There is an invisible passive film on all stainless steel that acts as a shield against corrosion. As long as this film is properly cared for, the metal is protected from corrosion. The following tips will assist you in this cleaning process.

- 1.) Use non-abrasive tools -
 - A) Soft cloths
 - B) Plastic scouring pads
 - C) Stainless steel pads (scrubbing motion must be in the direction of the polishing marks)
 - D) **Do not use** - Steel pads, Wire brush, or Scrapers
- 2.) Clean or scrub in the same direction of the visible polishing lines

- 3.) Use alkaline, alkaline chlorinated, or non-chloride containing cleaners. Avoid cleaners containing quaternary salts. Consult your cleaner supplier for these types of products.
Use recommended strength for cleaning
- 4.) Use soft water - this reduces deposits
Consult your treatment specialist for the proper filters to eliminate corrosive elements
- 5.) Clean frequently to avoid build-up of hard, stubborn stains
- 6.) Rinse thoroughly - wipe dry immediately - allow to air dry
Do not let water or cleaner set on stainless steel - wipe off immediately
- 7.) **Never use** Hydrochloric acid (muriatic acid) on stainless steel

RECOMMENDED CLEANERS

JOB	CLEANING AGENT	COMMENTS
Routine cleaning/disinfectants	Soap, Ammonia, Detergent, Medallion, Foamquat™	Use cloth or sponge
Fingerprints, smears	Arcal 20, Lac-O-Nu, Ecoshine	Provides barrier film
Stubborn stains/discolorations	Cameo, Talc, Zud, First Impression	Rub in direction of polish lines
Grease, fatty acids, blood	Easy-off, De-grease it, Oven aid	
Grease and oil	Any good commercial detergent	Use cloth or sponge
Restoration/Passivation	Bonefir, Super Sheen	

CAUTION: DO NOT USE CHLORINE BASED PRODUCTS!

Please call VSSI, Inc. with any questions you may have.
